Post Office Box 471  
Kettleman City, California 93239  
209/386-9711

May 26, 1987

Dear Customer:

Attached is a copy of the Kettleman Hills Facility Treatment/Disposal Rate Schedule which becomes effective July 1, 1987 under Chemical Waste Management, Inc.'s (CWMI) contract with your company.

The following changes are reflected in the revised rate schedule.

Acidic Corrosives and Other Restricted Heavy Metal Wastes:

Higher concentration acidic wastes are quoted on request due to specific treatment requirements. After July 1, 1987, waste material in this category may be treated/disposed either at Kettleman Hills or other approved treatment facilities dependant on space availability and construction schedule of the new acid treatment unit at Kettleman Hills.

Land Disposal Ban:

On July 8, 1987, the land disposal ban for the 'California List' will become effective. For the most part this regulatory deadline does not effect you because the restrictions have been in effect for several years. However, it is unclear at this time as to what the final federal regulations will impose as to acceptable levels of halogenated organic compounds suitable for land disposal. As the regulations now exist, wastes containing halogenated organic compounds equal or greater than 1,000 mg/kg will be prohibited from land disposal.

Two exceptions do apply:

- 1) CERCLA contaminated soil and debris:

In order to expedite Superfund clean-ups, Congress provided an exception for contaminated soil or debris resulting from a response action taken under section 104 or 106 of CERCLA, or corrective action taken under RCRA until November 8, 1988.

6/4  
→ Bob T.  
FyE + action  
as appropriate.  
Janet  
Talk w/ Dave,  
Craig, Don, &  
Kurt on  
impacts +  
necessary  
actions.

Do we have info. on this, i.e.  
type of treatment, schedule, etc.?

Will this mean  
we need to incinerate  
more waste streams

Since  
State  
cut-off  
would be  
lower than Fed?
